
Reading guide

C shows each task's own raw execution measure (not comparable across tasks). Grip: held force / target (1 = exactly on target). Tapping: taps per second (calibrated max. ~ 7/s). D puts both on one scale (% of calibrated capacity).

All panels: successful trials, except A (all trials) and E (all rated trials). Boxes: person means; * = grip vs tapping, LMM, Holm-corrected p < .05.
